

## Special Issue : Laser Processing for Copper

### On issuing

Furukawa Electric Group has upheld the theme of “Growth through the creation of businesses that solve the social issues” with the aim of achieving the Vision 2030. And under the evolutionary slogan of “Open, Agile, Innovative”, the Group is promoting the formation of partnerships especially with outsiders to the Group as a materiality, which is an important management issue.

This is the first time for Furukawa Electric Review to receive two contributions from outside the Group. Both are from strong partners who have mastered the technology and shared the success of our business in the field of the “Laser Processing for Copper”.

Including these contributions, we hope that the author’s passion for “Laser Processing for Copper” entrusted to each paper can be felt.

*Furukawa Electric Review Chief Editor, Intellectual Property Dept. General Manager Michio Ohkubo*

### Opening Remarks

Solving the Social Issues Through Marketing Orientation and Solution Proposals	<i>Kazuyuki Umeno</i> .....	1
--	-----------------------------	---

### Special Contribution

Advances in Material Processing Technology of Copper Using Short Wavelength Lasers – The Role of Blue Diode Lasers in The Smart Country Concept – <i>Professor, Joining and Welding Research Institute, Osaka University Masahiro Tsukamoto Yuji Sato, Ritsuko Higashino, Nobuyuki Abe, Yoshinori Funada, Yu Sakon, Seigo Ouchi, Kohhei Asano, Koji Tojo</i>	.....	2
Development of High-Power Blue Laser Diodes <i>Principal Researcher, NICHIA CORPORATION Shinichi Nagahama</i>	.....	10

### Papers

High Quality Processing of Copper Using Fiber Lasers <i>Keigo Matsunaga, Taro Murayama</i>	.....	15
Development of the High-Power Blue Laser Diode Module and its Laser System <i>Naoki Hayamizu, Hajime Mori</i>	.....	21
The Features of the Blue-IR Hybrid Laser and the Copper Processing Technique – High Quality Copper Welding by Using the Blue-IR Hybrid Laser – <i>Masamitsu Kaneko, Nobuyasu Matsumoto, Takashi Shigematsu</i>	.....	25
Development of Laser Welding Applications With Blue-IR Hybrid-Laser <i>Tomomichi Yasuoka, Nobuyasu Matsumoto, Masamitsu Kaneko, Takashi Shigematsu</i>	.....	29

### New Products

Blue-IR Hybrid Laser “BRACE”	.....	33
------------------------------	-------	----

### Regular Papers

<b>Communications Solutions</b> Hollow Core Fiber Cable <i>Kazunori Mukasa</i>	.....	36
<b>Communications Solutions</b> The Development of a Nano-ITLA for Digital Coherent Datacenter Interconnects <i>Masayoshi Nishita, Noritaka Matsubara, Junichi Hasegawa, Kazuki Yamaoka, Maiko Ariga, Yusuke Inaba, Masayoshi Kimura, Masaki Wakaba, Masahiro Yoshida, Kazuomi Maruyama, Toshihito Suzuki, Hiroyuki Ishii, Yasumasa Kawakita</i>	.....	44

### New Products

<b>Communications Solutions</b> Super High End Fusion Splicer S185ROF / S185PMROF	.....	49
<b>Communications Solutions</b> Ultra-high Fiber Count (UHFC) 6912-Fiber Cable With 200 μm 16-Fiber Rollable Ribbon, Ribbon Fiber Mass Fusion Splicer S124M16 and Related Tools	.....	51
<b>Electronics &amp; Automotive Systems</b> Roughening Copper Plating With High Resin Adhesion	.....	54
